**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, drawn to a an apparatus for cleaning a surface within a vessel including a combustion conduit and resilient member, classified in class 431, subclass 121.
  - II. Claims 10-13, drawn to a method for cleaning a surface within a vessel of industrial equipment, classified in class 431, subclass 3.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus of invention I could be used to practice another and materially different process such as functioning as a combustion pulse burner in a pulse detonation engine in which combustion is effected thorough intermittent feed charges which create a peak combustion followed by a minimum combustion rate.
3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the

Art Unit: 3749

inventions have acquired a separate status in the art in view of their different classification, and would require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

### *Conclusion*
